New

The widget

Mila Hair Studio's own site, with one new thing at the bottom: the widget. The client pastes one script tag; the words, the name and the colour come from their workspace. Tapping it opens the form.

WHAT CHANGES

- A widget on the client's site, in the client's name

NEW WORDS WAITING FOR YOUR OK

Not sure which one? Ask Marta.

Our trichologist answers you with a short video, within a day.

N223 items 2, 11 and 13. The site itself is the client's; only the widget is ours.

DECIDED (N223)

A normal user answers, as a Take; one backend, a workspaces table; one project per request; no AI visible in the MVP, pairs and documents as the client's JSONL export; WhatsApp to an answer page with one reply box; the client is the controller; the photo kept 30 days after the answer; a 24-hour alarm; the client's name with "powered by"; free for testers; the founder creates the workspace in admin. N224: the answer schema extracted by the AI and checked in admin, Never 2 for the answerer, autonomy per workspace and request type, pgvector. N225: a sales tool first, judged by purchases and bookings; the answer page carries the cart and the booking; a pair keeps its outcome; the form is the product finder; instant answers only once a model answers alone. N226: the answer is a Take, her voice over the slides she picks, camera off; a typed answer for follow-ups only. Every word on these screens waits for your OK (Never 4).

New

The form

The form is the shop's product finder (N225 item 4): a photo first, a few words optional, her WhatsApp number, one consent tick in the client's name. Send is live once there is a photo or words, and the tick. The request creates a guest identity for Ola and one request row in Mila's workspace.

WHAT CHANGES

- The photo is the main input; words are optional
- One form for every tester; per-client fields come later, from the pairs

NEW WORDS WAITING FOR YOUR OK

- Show Marta your scalp or hair. She answers with a short video and what to use.
- Add a photo of your scalp or hair · Deleted 30 days after the answer.
- Or tell her in a few words (optional)
- Your WhatsApp number, for the answer
- Mila Hair Studio may use what I wrote and my photo to advise me about my hair and scalp, and may message me on WhatsApp. How Mila keeps it.
- Send to Marta
- powered by WillpowerLab

N223 items 7, 8 and 9; N225 item 4. The consent sentence is a stand-in: counsel writes the one that goes live, with the DPA.

The photo is already added and the words are filled in so you can tap through. Tick the box, then Send to Marta.

Real app, new parts

The request lands

The Lounge as it is today. The request is the Take's one ask, in the slot every ask uses: Will's lead-in bubble in the thread, the grey card and the pair in the footer in place of Type here (E1, D4). Nothing sits between a Take and its Ideal Text: a request waits until the chain of the last Take is done. Not now brings it back after the next Take, as every ask.

WHAT CHANGES

- A new kind of ask in the footer slot: a customer's request

NEW WORDS WAITING FOR YOUR OK

Ola, a customer of Mila Hair Studio, asks for your advice.

Asked 12 minutes ago · will get the answer on WhatsApp

Not now

Answer

N223 items 1 and 16; the walk page's E1 (one ask per Take, the first that waits) and D4 (an ask and its buttons are adjacent). The card's text is Ola's own words, uncut.

DECIDED (N223)

A normal user answers, as a Take; one backend, a workspaces table; one project per request; no AI visible in the MVP, pairs and documents as the client's JSONL export; WhatsApp to an answer page with one reply box; the client is the controller; the photo kept 30 days after the answer; a 24-hour alarm; the client's name with "powered by"; free for testers; the founder creates the workspace in admin. What she recommends

Before the recording, Marta taps what she recommends from Mila's catalogue. Each pick is a slide: Ola's request and photo first, then each product. The same kind of tap list as the helper words, in the lens. Her picks fill the answer schema before she says a word (N224 item 1). Camera off: a Take is her voice over slides, never her face.

WHAT CHANGES

- A product picker before the recording; the picks are the slides and the schema

NEW WORDS WAITING FOR YOUR OK

What do you recommend to Ola? Tap it.

Each pick is a slide. You record over them, camera off.

Record over 3 slides · Record over the request

Just the request

N226 items 1 and 2. The catalogue is the client's documents (N223 item 5).

Tap or untap products, then Record over N slides.

DECIDED (N223)

Real app, new parts

Recording the answer

The locked recording screen, unchanged: the top line, the slides, the strip, Back and Next slide, Finish take on the last. The deck is Ola's request and Marta's picks, so she speaks to each product in turn and the Ideal Text comes out one paragraph per slide. Her voice only; the camera is never on. Finish take leads to the processing wait, as every Take.

WHAT CHANGES

- The request and the picks as the Take's slides

NEW WORDS WAITING FOR YOUR OK

Ola asks · Marta recommends (the slides' labels)

N223 items 1, 3 and 5. The recording goes through the processing-authorization path like every Take. No helper words on Take 1, as today.

Next slide through the deck, then Finish take. × asks whether to discard, as today.

DECIDED (N223)

A normal user answers, as a Take; one backend, a workspaces table; one project per request; no AI visible in the MVP, pairs and documents as the client's JSONL export; WhatsApp to an answer page with one reply box; the client is the controller; the photo kept 30 days after the answer; a 24-hour alarm; the client's name with "powered by"; free for testers; the founder creates the workspace in admin. Real app

Processing

The processing wait, unchanged. It moves on by itself.

WHAT CHANGES

Nothing.

DECIDED (N223)

A normal user answers, as a Take; one backend, a workspaces table; one project per request; no AI visible in the MVP, pairs and documents as the client's JSONL export; WhatsApp to an answer page with one reply box; the client is the controller; the photo kept 30 days after the answer; a 24-hour alarm; the client's name with "powered by"; free for testers; the founder creates the workspace in admin. N224: the answer schema extracted by the AI and checked in admin, Never 2 for the answerer, autonomy per workspace and request type, pgvector. N225: a sales tool first, judged by purchases and bookings; the answer page carries the cart and the booking; a pair keeps its outcome; the form is the product finder; instant answers only once a model answers alone. N226: the answer is a Take, her voice over the slides she picks, camera off; a typed answer for follow-ups only. Every word on these screens waits for your OK (Never 4).

The Lounge and the processing wait are screenshots of today's app; the recording screen, the lens and the Ideal Text page are drawn from their locked prototypes. Marta, Ola and Mila Hair Studio are examples. Clips are silent here. The product picker, the typed follow-up and the customer's pages are new screens.

Real app, new parts

The lens

The lens opens by itself on the walk, as after every Take: the hello, Marta's clip, the praised moment and why it was good. This is the part that trains Marta's sales communication: the walk's feedback is about how she said it, never about the shampoo. Next, after the summary, opens the Ideal Text.

WHAT CHANGES

- Nothing in the lens; only its content is an answer to a customer

N223 items 1 and 14. The walk's words are signed; the praise reason is an example the backend writes. The helper words, the practise moment and other speakers come as in any walk; the prototype shows the first step only.

DECIDED (N223)

A normal user answers, as a Take; one backend, a workspaces table; one project per request; no AI visible in the MVP, pairs and documents as the client's JSONL export; WhatsApp to an answer page with one reply box; the client is the controller; the photo kept 30 days after the answer; a 24-hour alarm; the client's name with "powered by"; free for testers; the founder creates the workspace in admin. New

The answer page

The answer page carries the sale (N225 item 2): Marta's voice over the slides she picked, the slides turning as she speaks (N226 item 3), what she said as text (the Ideal Text), each recommended product with Add to cart and Mila's code in the link, Book with a date when Marta says come in, and one reply box. The page shows the latest shared Take. No score, no number, no verdict about Ola. A purchase or a booking through these links is the request's outcome, kept on the pair.

WHAT CHANGES

- A public answer page per request, by signed link, in the client's colours
- Add to cart on each product, Book with a date: the money moment is on the page
- The outcome rides the pair (N225 item 3)

NEW WORDS WAITING FOR YOUR OK

- Marta answered you
- Trichologist at Mila · this afternoon
- Listen to Marta. The slides turn as she speaks.
- Your routine for the next three weeks
- Marta's pick for a dry, irritated scalp
- Add to cart · Added to your cart · code MARTA10 applied
- Head spa visit with Marta

The workspace

Where you create a client's workspace: the name and colour the customer sees, the WhatsApp sender, the answerer, the script tag, the DPA, and the counts. The requests list shows each outcome in words: bought, booked, or neither, read from Mila's links (N225 item 3). Export pairs gives the JSONL of (request, schema, final answer, transcript, outcome) with the client's documents and the golden set. A weekly note to Mila's owner says the same in five lines. Nothing here is a score about a person.

WHAT CHANGES

- An admin page per workspace
- The outcome of each request, in words
- A weekly note to the client's owner

NEW WORDS WAITING FOR YOUR OK

- Workspaces
- Salons
- Requests · Bought · Booked
- Outcome: bought Calm Scalp Shampoo · booked the head spa · not yet
- Weekly note to Mila: sent Mondays
- Script tag
- Export pairs (JSONL)
- Data processing agreement
- Free for testers

N223 items 2, 5, 12 and 13; N224 item 1; N225 items 1 and 3.
