Who sees what

One tree decides every screen of the way in. Each fork is either something the app already knows (whose link brought them, a coach's link, their team, the languages they spoke in Take 1) or the one thing it asks: “What would you like to do here first?”. Nothing is asked before the first Take (Never 3), nothing is asked that the five slides answered, and nobody sees a screen that does not fit them. Pick a person to light up their path.

The App Model's people

Pick one, or set the forks yourself under their name.

AI models → Start your own, filled	·	✓	✓	·	·	·	·
Your queue (the coach's row)	·	·	·	·	·	·	✓

What you decide

1. **The choice's words.** Two drafts exist: the App Model's “Ask my team something” · “Share what I know” · “Prepare a talk” (its proposal "Onboarding, Explained"), and the widget hand-off's “To learn from others” · “To share what I know” · “Both”.
   Recommended: the App Model's three. They match N564 (a date only for “Prepare a talk”), and every answer opens a branch here. “To learn from others” opens nothing.
2. **One answer or several.** Someone may both prepare a talk and share what they know.
   Recommended: several, as N487's languages question works (tap each, then "Send" in the bar's middle). The tree treats each answer as its own fork, so several just means more than one branch is lit.
3. **Who sees the agreement.** N453 item 5 shows it to people in a team, before anyone's recordings reach them.
   Recommended: keep it, and add sharers outside a team. Whoever shares will hear recordings from the people who join them.
4. **Where the model's setup goes.** N571 settled it: never in the way in. After the walk, “Start your own” under “AI models” opens filled from the five answers. The widget's call scale (N569) belongs to that setup, not to the onboarding.
   This replaces the model card and the scale I put inside the wait in the widget hand-off.
5. **Only for sharers:** the join questions, "Copy my link ›", "Your questions for people who join ›", "AI models" → "Start your own", and the website switch once N569 is signed.
   Someone who only asks their team never sees any of them, so nothing about knowledge bases or models reaches a person it does not fit.

Who sees what

One tree decides every screen of the way in. Each fork is either something the app already knows (whose link brought them, a coach's link, their team, the languages they spoke in Take 1) or the one thing it asks: "What would you like to do here first?". Nothing is asked before the first Take (Never 3), nothing is asked that the five slides answered, and nobody sees a screen that does not fit them. Pick a person to light up their path.

Your queue (the coach's row)	·	·	·	·	·	·	✓

What you decide

1. **The choice's words.** Two drafts exist: the App Model's "Ask my team something" · "Share what I know" · "Prepare a talk" (its proposal "Onboarding, Explained"), and the widget hand-off's "To learn from others" · "To share what I know" · "Both".
Recommended: the App Model's three. They match N564 (a date only for "Prepare a talk"), and every answer opens a branch here. "To learn from others" opens nothing.
2. **One answer or several.** Someone may both prepare a talk and share what they know.
Recommended: several, as N487's languages question works (tap each, then "Send" in the bar's middle). The tree treats each answer as its own fork, so several just means more than one branch is lit.
3. **Who sees the agreement.** N453 item 5 shows it to people in a team, before anyone's recordings reach them.
Recommended: keep it, and add sharers outside a team. Whoever shares will hear recordings from the people who join them.
4. **Where the model's setup goes.** N571 settled it: never in the way in. After the walk, "Start your own" under "AI models" opens filled from the five answers. The widget's call scale (N569) belongs to that setup, not to the onboarding.
This replaces the model card and the scale I put inside the wait in the widget hand-off.
5. **Only for sharers:** the join questions, "Copy my link ›", "Your questions for people who join ›", "AI models" → "Start your own", and the website switch once N569 is signed.
Someone who only asks their team never sees any of them, so nothing about knowledge bases or models reaches a person it does not fit.

Who sees what

One tree decides every screen of the way in. Each fork is either something the app already knows (whose link brought them, a coach's link, their team, the languages they spoke in Take 1) or the one thing it asks: "What would you like to do here first?". Nothing is asked before the first Take (Never 3), nothing is asked that the five slides answered, and nobody sees a screen that does not fit them. Pick a person to light up their path.

What you decide

1. **The choice's words.** Two drafts exist: the App Model's “Ask my team something” · “Share what I know” · “Prepare a talk” (its proposal "Onboarding, Explained"), and the widget hand-off's “To learn from others” · “To share what I know” · “Both”.
Recommended: the App Model's three. They match N564 (a date only for “Prepare a talk”), and every answer opens a branch here. “To learn from others” opens nothing.
2. **One answer or several.** Someone may both prepare a talk and share what they know.
Recommended: several, as N487's languages question works (tap each, then “Send” in the bar's middle). The tree treats each answer as its own fork, so several just means more than one branch is lit.
3. **Who sees the agreement.** N453 item 5 shows it to people in a team, before anyone's recordings reach them.
Recommended: keep it, and add sharers outside a team. Whoever shares will hear recordings from the people who join them.
4. **Where the model's setup goes.** N571 settled it: never in the way in. After the walk, “Start your own” under “AI models” opens filled from the five answers. The widget's call scale (N569) belongs to that setup, not to the onboarding.
This replaces the model card and the scale I put inside the wait in the widget hand-off.
5. **Only for sharers:** the join questions, "Copy my link ›", "Your questions for people who join ›", "AI models" → "Start your own", and the website switch once N569 is signed.
Someone who only asks their team never sees any of them, so nothing about knowledge bases or models reaches a person it does not fit.

Who sees what

One tree decides every screen of the way in. Each fork is either something the app already knows (whose link brought them, a coach's link, their team, the languages they spoke in Take 1) or the one thing it asks: "What would you like to do here first?". Nothing is asked before the first Take (Never 3), nothing is asked that the five slides answered, and nobody sees a screen that does not fit them. Pick a person to light up their path.

What you decide

1. **The choice's words.** Two drafts exist: the App Model's "Ask my team something" · "Share what I know" · "Prepare a talk" (its proposal "Onboarding, Explained"), and the widget hand-off's "To learn from others" · "To share what I know" · "Both".
   Recommended: the App Model's three. They match N564 (a date only for "Prepare a talk"), and every answer opens a branch here. "To learn from others" opens nothing.
2. **One answer or several.** Someone may both prepare a talk and share what they know.
   Recommended: several, as N487's languages question works (tap each, then "Send" in the bar's middle). The tree treats each answer as its own fork, so several just means more than one branch is lit.
3. **Who sees the agreement.** N453 item 5 shows it to people in a team, before anyone's recordings reach them.
   Recommended: keep it, and add sharers outside a team. Whoever shares will hear recordings from the people who join them.
4. **Where the model's setup goes.** N571 settled it: never in the way in. After the walk, "Start your own" under "AI models" opens filled from the five answers. The widget's call scale (N569) belongs to that setup, not to the onboarding.
   This replaces the model card and the scale I put inside the wait in the widget hand-off.
5. **Only for sharers:** the join questions, "Copy my link ›", "Your questions for people who join ›", "AI models" → "Start your own", and the website switch once N569 is signed.
   Someone who only asks their team never sees any of them, so nothing about knowledge bases or models reaches a person it does not fit.
